Process control system PCS7

The process control system from Siemens is the base

The distributed control system enables you to respond swiftly to constantly changing market requirements. Integrated safety concepts ensure continuous operation of your systems and protect man, machine and the environment. You profit from high system availability, investment security and future-safe technology, together with a reduced total cost of ownership.

PCS 7 combines a unique scalable architecture with powerful engineering tools and a wide variety of additional functions such as alarm management, process safety and asset management, all of which can be integrated seamlessly into your existing environment. SIMATIC PCS 7 has everything you need to completely and safely automate your entire production process, from goods receipt to goods issue, in both manufacturing and process plants. In addition, process data from the control system can be transferred into your superior business-management system. In case you don't have such a system it is also possible to use such data in Excel or other programs.

We are Siemens Solution Partner and realized already a lot of plants based on PCS7 in a lot of different branches of the industry. It would be a pleasure for us to create also such a tailor-made solution for you.

Following, you will find a small listing of plants we have already realized with our control concept:

- Dorfner Mühle
- **Heinz Glas**
- Zwiesel Kristallglas
- **Pfleiderer Spezialpapiere**
- MAN Diesel & Turbo SE
- **Schott**
- **OSRAM**
- Rodenstock
- Swarovski
- Ocean Glass
