## Water treatment

We are a professional automation partner in the field of controlling and the regulation of water treatment plants and water management plants. Our control systems offer latest technology in combination with the appropriate engineering services.

Due to our big commitment in integrated automation we gathered a lot of knowledge of water treatment plants. We can integrate your new or existing water treatment plant into a new or existing process control system. The big advantage of integrated automation consists in the total controlling, monitoring and operating of all the components of an industry plant. That means you have a complete overview – from the batch plant over the filter plant up to the warehouse management.

It's also a pleasure for us to create a discrete control system for your filter plant. We plan and program tailor made control software and visualization for HMI (human machine interface) devices or also PC's. Furthermore, data exchange between the control system and the existing databases or business management software is possible.
